

## Online Calculator

### Overview

This is an online calculator that supports five basic arithmetic operations: addition, subtraction, multiplication, division, and modulo. When performing multiple operations, it follows the order of operations to calculate the result. It also allows users to delete input using the clear and backspace buttons. It has a responsive design, making it suitable for personal computer, tablet or mobile use.

## Functionalities

This calculator can perform the following basic operations: addition, subtraction, multiplication, division, and modulo. When evaluating multiple expressions, it follows the mathematical order of operations.

The parts of this calculator as well as their corresponding functions are summarized on the table below.

Parts	Function
0, 1, 2, 3, 4, 5, 6, 7, 8, 9, 10	Enters digits from 0 to 9
.	Inserts decimal point
+	Performs addition
-	Performs subtraction
x	Performs multiplication
/	Performs division
%	Performs modulo operation
=	Evaluates the entered expressions
←	Deletes the last character on the main screen
C	Deletes all entries, both in main and lower screens
Main Screen	Displays the user input as well as the final result
Lower Screen	Displays the current value of the expression
